# Reducing Your Docker Image Size

Manuel Weiss
Co-Founder

CODESHIP

# You need smaller Docker images!

## But, why?

CODESHIP

# How long does it take...

*When you pull images?*
*When you build images?*
*When you cache images?*
*When you push images?*

Smaller images mean
faster development.

But, there are tradeoffs.

So, how do we optimize?

CODESHIP

# Choosing The Right Base Image

CODESHIP

# Managing Our Files

CODESHIP

# Cleaning Up Our Images

CODESHIP

# Architecture Matters

CODESHIP

# Discuss with your team:

- What can we exclude from the images?
- Is there a better base image to use?
- What can we avoid repeating?
- Can we move complexity to/from build time?
- Can we reduce layers in our Dockerfile?

CODESHIP

Do what's right for your application.

(But, definitely optimize.)

# *Thanks!*
